

Figure 1 is a plot of Airmass versus UT (Universal Time) for the observation of NGC 6052 on 2019-09-25. The plot shows the airmass for MMT (green line) and Magellan (red line) telescopes. The y-axis is Airmass (0.5 to 3.0) and the x-axis is UT (16:52 to 15:22). Shaded regions indicate night time for MMT (green) and Magellan (red). The MMT airmass starts at approximately 2.0 at 16:52, decreases to a minimum of about 0.5 at 02:52, and then increases to a maximum of about 1.2 at 12:52. The Magellan airmass starts at approximately 2.0 at 05:22, decreases to a minimum of about 0.5 at 10:22, and then increases to a maximum of about 1.2 at 15:22. The shaded regions for MMT Night (green) and Magellan Night (red) are shown as vertical bands.
